

Magnetic Base deadens fence deflection

My table saw's front-locking rip fence sometimes deflects, causing problems when I'm ripping a large workpiece. To stop the deflection, use a magnetic dial-indicator base to steady the outfeed end of the fence. Place the magnet on the outside of the fence, where shown, and flip the switch. The magnet holds the fence in place under 10–15 pounds of pressure, giving just enough insurance to cut with confidence.

No magnet??? Aluminum table top??? Use a LEVER CLAMP...
